

**When your workers** are potentially subjected to hazardous environments while involved with confined spaces or elevated work projects, protect them with the knowledge that the best on-site standby rescue service is just minutes away.

Under Ontario Regulation 632/05, it states that if your personnel are entering confined spaces, the employer must create a rescue plan and provide a competent rescue team or trained personnel that can perform an emergency rescue within a timely matter...calling "9-1-1" is no longer an acceptable solution.

Whether your facility is small and does not conduct enough confined space entries to warrant your own team or you just want to supplement your existing ER teams on an occasional basis (e.g. plant-wide maintenance shutdowns or multiple simultaneous entries), EHS Canada Inc. can assist and respond to your needs.

**Our Confined Space Rescue Services** are second to none. Our professional confined space and high angle rescue teams have the necessary training, technical rope skills and experience that come with the territory and utilize state-of-the-art rescue equipment that meet or exceed National Fire Protection Association (NFPA) standards. EHS Canada Inc. can supply your company with teams that are fully equipped to perform rescues.

We provide a full line of confined space services and can customize our services to meet your needs. Additional confined space related services that are available include:

- Attendants / Air monitoring
- Confined Space Ventilation
- Confined Space Entry & Rescue Training (customized / plan specific)
- Consulting (Confined Space Programs, Risk and Hazard Assessments, Rescue Plans)

We pride ourselves on being able to provide industry leading and cost effective industrial rescue and training services.

**Visit our website or call us now** to see our full range of services and learn how EHS Canada Inc. can assist you in your rescue and safety needs.
